## **INTRO :**

The archaeopteryx project is named after a dinosaur-class extinct bird that was a carnivore. One of the strongest birds in history, this prehistoric creature is also known as the "ancient wing" or "ancient chicken." With a new means to improve, smart contracts will radically alter how firms operate. Additionally, they will develop dapps, or decentralized applications, to automate blockchain-based tasks.

Everyone will soon require blockchain technology, and The archaeopteryx platform intends to give faultless services as a top service provider in this field. In plainer terms, the archaeopteryx is a trading and investment platform dispersed across numerous networks composed of legitimate blockchains.

Users of this platform can exchange different types of digital currency, typically just for the smallest fees and quickest transaction times. Additionally, users can profit from innovative investment strategies including staking, liquidity providing, and other types.

archaeopteryx , unlike previous initiatives that did so with the tagline "creating a new project," has not entered this market with statements of this nature. The only way we can do this is by looking at various DeFi projects. Instead, we wish to offer clients all the services now provided in this sector, but with far higher quality. All we need are better speed, quicker processing, lower costs, simpler ways to do multiple things at once, and easier access.

Prior to implementing this significant project, our top experts carefully examined all the comparable projects that adhered to the archaeopteryx strategy and made note of all the flaws and disadvantages that the clients had highlighted.

We were able to investigate the causes of the advantages. We advise reading this white paper while adhering to capital management and financial security principles if you want to make a guaranteed profit of 1000% in just 18 months.

Stay with us in this uncertain economic climate so you do not miss out on the market. Finding a safe investment platform in this situation is challenging. Due to earlier endeavors' failures, we have designed a new project using existing strengths to improve upon flaws and focus on strengths.

We advise reading this white paper while adhering to capital management and financial security principles if you want to make a guaranteed profit of 1000% in just 18 months.

## **DISCLAIMER**

Stay with us in this uncertain economic climate so you do not miss out on the market. Finding a safe investment platform in this situation is challenging.

"Unity is Strength," a well-known Japanese proverb, serves as the archaeopteryx motto. Together, we can accomplish anything we set out to do.

Since users, or "holders," are our allies in the crypto market, their presence can help our company grow or even bring it down. So, we plan to explain everything to our partners about how we work. It is ultimately up to you to choose whether or not you want to contribute to our project.

If purchasing digital currencies is prohibited in your nation, we humbly request that you refrain from investing in the archaeopteryx project.

Regarding various financial matters, we must abide by all relevant domestic and international laws.

Only by adhering to all the guidelines for financial security do we ask you to make investments in this sector. This will protect your money since investing in digital currencies is risky and never completely safe. Investing a portion of your funds in areas where you will have fewer needs in the next six to twelve months is preferable.

It is important to understand that when we say we "100% guarantee," we mean that all requirements and resources have been met in order for this project to be completed as successfully and optimally as possible. The crucial justification for our 100% guarantee is the lowest error rate. However, this does not imply that our project is faultless. As a result, you should always be aware of potential blunders and inaccuracies.

Invest in endeavors with a 99% failure rate and adjust your budget accordingly. You succeed when you start the project expecting it to fail; this factor causes you to become fixated on deciding how much to invest in and only enter the market with the bare minimum.

## **GENERAL DESCRIPTION:**

Blockchain is well-liked, but it also has a lot of detractors. This is due to the fact that many people who entered this field lost money, and many projects in this field defrauded their users of a lot of money. You will understand why archaeopteryx is unique and how it was able to reassure investors by locating and eliminating all the things that worried them after reading the remainder of this article and carefully examining the archaeopteryx white paper.

The security of this project is comparable to that of major, well-known projects worldwide.

This white paper on blockchain investments may be one of the most explicit ones because it covers handling money in great detail. We put a value on our investors and think your money is more important than ours.

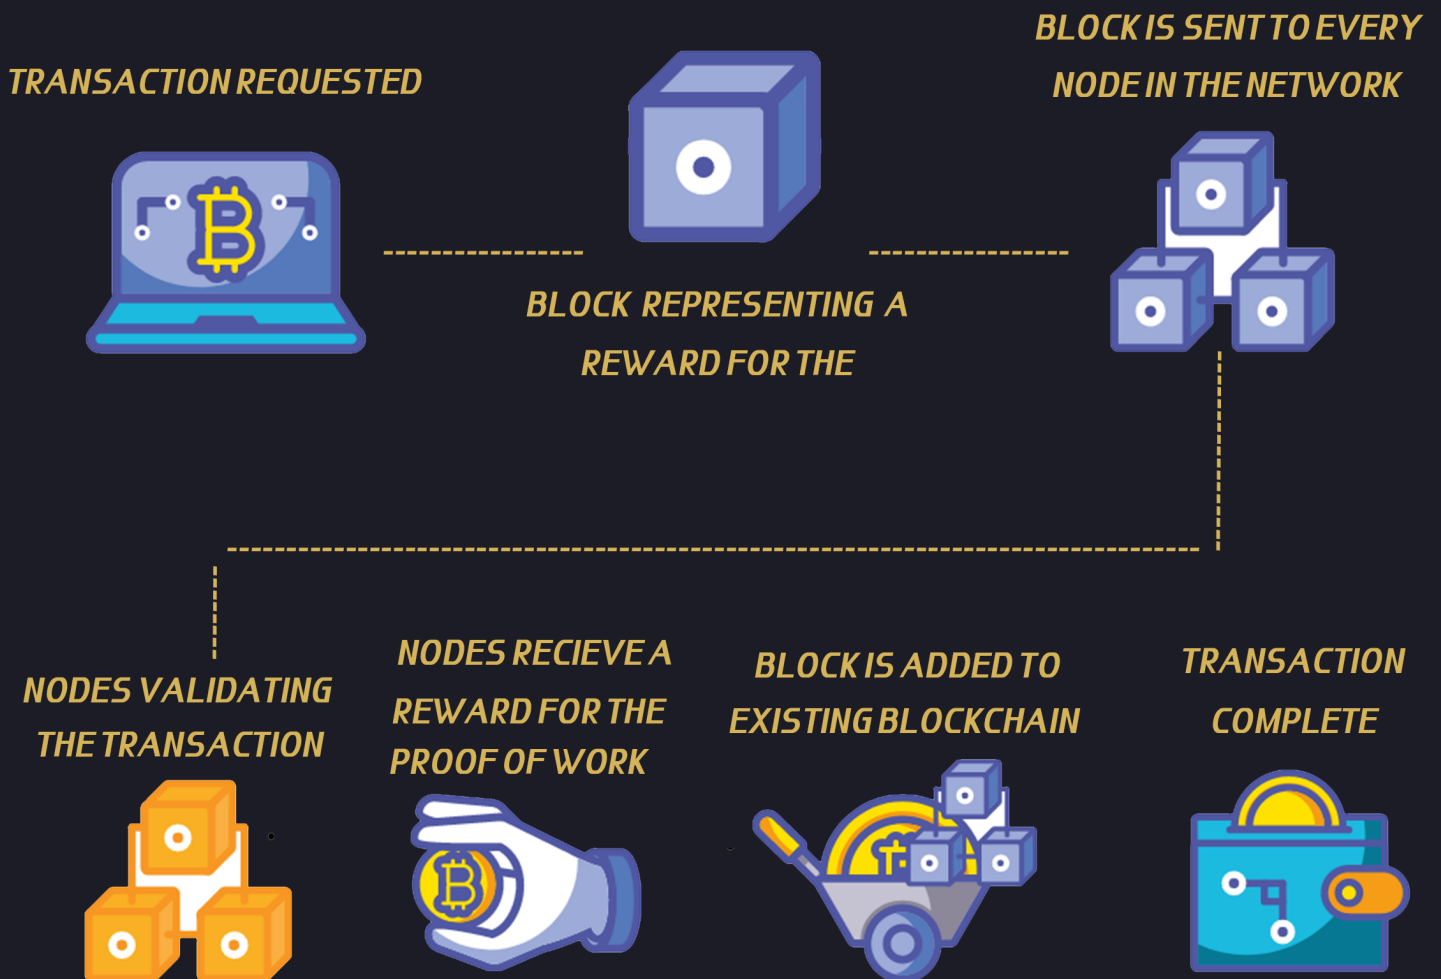

With the utmost care and by all laws, we have told our users that if they want to join our project or any other project, they should take risk and capital management seriously and never put all their money into one project. Even if the investment fails, it will not hurt the investor too much.

The archaeopteryx Co. has begun using the Binance Smart Chain BeP-20 and intends to develop tokens for the Tron TRC-20 blockchain network And Polygon(Matic) network.

The Ethereum network, one of the most dependable blockchains, is where we also want to tokenize. In a short amount of time, archaeopteryx hopes to offer its users the three reliable networks of Tron, Binance, Polygon, and Ethereum. On the archaeopteryx platform, users can exchange more than 400 valid cryptocurrencies with each other or receive compound interest using the staking plan as a single currency or a currency pair. Compound interest helps your money grow daily by adding your capital profit.

The money and the previous day's profit are also considered when calculating the gain for the following day. This procedure continues until the conclusion of the investment contract. Staking your archaeopteryx tokens is simple and only requires a one-time transaction fee of fewer than 10 cents on the

Tron network and less than 50 cents on the Binance network. In other words, carrying out this process can also benefit daily without gear. Since archaeopteryx lacks an intermediary, you can handle the stake professionally and simply without running the risk of becoming bankrupt.

Every investment placed on the archaeopteryx platform includes compound interest. archaeopteryx will not need to keep up its 51% security because, as knowledgeable users, you already know enough about 51% of assaults. However, if you are one of the inexperienced new users, we are compelled to let you know that the 51% attack takes place when hackers have the chance to seize control of 51% of the network on different blockchain networks.

## **HOW DO THE ARCHAEOPTERYX TOKENS BECOME WORTHWHILE?**

The token will not be worth much if no one wants to buy it or if it offers no benefit to the users. Therefore, we will increase the archaeopteryx token's value daily and make it useful. Making it possible to buy and sell the exoft token directly on the exchange platform for this project is the first thing we can do.

Therefore, the archaeopteryx token can be instantaneously and automatically purchased or traded on the project site. Additionally, you can sell as many tokens as you have at any time via the project website.

Purchase your preferred stable currency, coins, and tokens, including Tether, Dai, Bitcoin, and Ethereum. Deals can also be made with exclusive discounts, staking features, and other alternatives, which we will discuss below.

- Through the archaeopteryx platform, you may immediately buy and sell archaeopteryx tokens. Additionally, you can instantly exchange any quantity of assets into any token or stable coin of your choice, such as Tether, BUSD, Ethereum, Bitcoin, and so forth, at a predefined global rate including Binance Coin, more than 400 different cryptocurrencies.

Archaeopteryx token holders who utilize the archaeopteryx exchange can convert and withdraw their assets in the form of Ethereum, Bitcoin, Tether, and more than 400 other currencies. Using archaeopteryx tokens will reduce the cost of trading on the archaeopteryx exchange by 50%.

Archaeopteryx tokens can be registered on the legitimate exchanges Hotbit, Coinex, and P2PB2B, where they can also receive daily gains.

- By partnering with businesses that provide portals that enable the sale of both physical and virtual products and services (archaeopteryx tokens can be used to pay for goods and services on websites and in online shops).

# STAKING

RECEIVE MONTHLY PROFIT

1% TO 8%

One of the best methods to profit from the network and archaeopteryx tokens is through staking. In this manner, you can generate income using one currency or two currencies. By purchasing archaeopteryx tokens and locking them in the archaeopteryx Exchange, you can use the single currency technique to generate a set daily profit.

The quantity of the locked token and the number of days it was held determine this profit. As compensation for this interest, you receive an archaeopteryx token. For other cryptocurrencies like Ethereum, Bitcoin, Binance Coin, Tether, and more than 400 others, you can exchange your interest or money. You can transfer it to a hardware wallet from a ledger, another exchange, or your wallet. For instance, if you want to wager 1000 archaeopteryx tokens, you must visit the archaeopteryx site, select the quantity of tokens, and then select the duration of the wager.

The token you desire will be locked after confirmation, and you will not be able to obtain it back until the contract's expiration date. However, you have the option of terminating the contract before it begins if you plan to depart early.

Before you can terminate the contract, at least half of the period must have passed. You can then cancel it for a price equal to 25% of the profit. Imagine ending the staking agreement early.

You must deposit the same number of tokens in currency pair staking mode as you would in other cryptocurrencies like Tether, BUSD, or Binance Coin. This is a result of your staking the pair's value.

You will get two in this specific case. The single currency mode will pay you the same sum. For instance, you would need to buy an equal quantity of Tether, BUSD, or Binance Coin in order to invest up to 1,000 archaeopteryx tokens in currency pair mode.

Which cryptocurrency you decide to buy depends on how much money you spend on the archaeopteryx token.

Please take it out of your wallet right away. You must have at least one hundred dollars' worth of Tether, BUSD, or Binance Coin in your wallet if one thousand archaeopteryx tokens are worth \$100 at the time of investment.

The investment stage will start when you have staked both currencies, and the coins you have chosen to lock up will remain locked for the time frame you specify.

You may not exercise your right to terminate the staking contract early until at least one-third of the period specified for the staking contract has passed. You may choose to end your agreement after the aforementioned period has passed without incurring any fees, collect your principal amount plus any accrued interest, and either quit the platform or keep using it. The digital cash you possess can be exchanged for several kinds of digital coins.

You must deposit the same number of tokens in currency pair staking mode as you would in other cryptocurrencies like Tether, BUSD, or Binance Coin. This is a result of your staking the pair's value. You will get two in this specific case. The single currency mode will pay you the same sum. For instance, you would need to buy an equal quantity of Tether, BUSd, or Binance Coin in order to invest up to 1,000 archaeopteryx tokens in currency pair mode.

You may choose to end your agreement after the aforementioned period has passed without incurring any fees, collect your principal amount plus any accrued interest, and either quit the platform or keep using it.

## **THE ARCHAEOPTERYX INVESTMENT STAKING PLANS :**

The digital cash you possess can be exchanged for several kinds of digital coins. network marketing and personal staking are the two types of archaeopteryx staking programs.

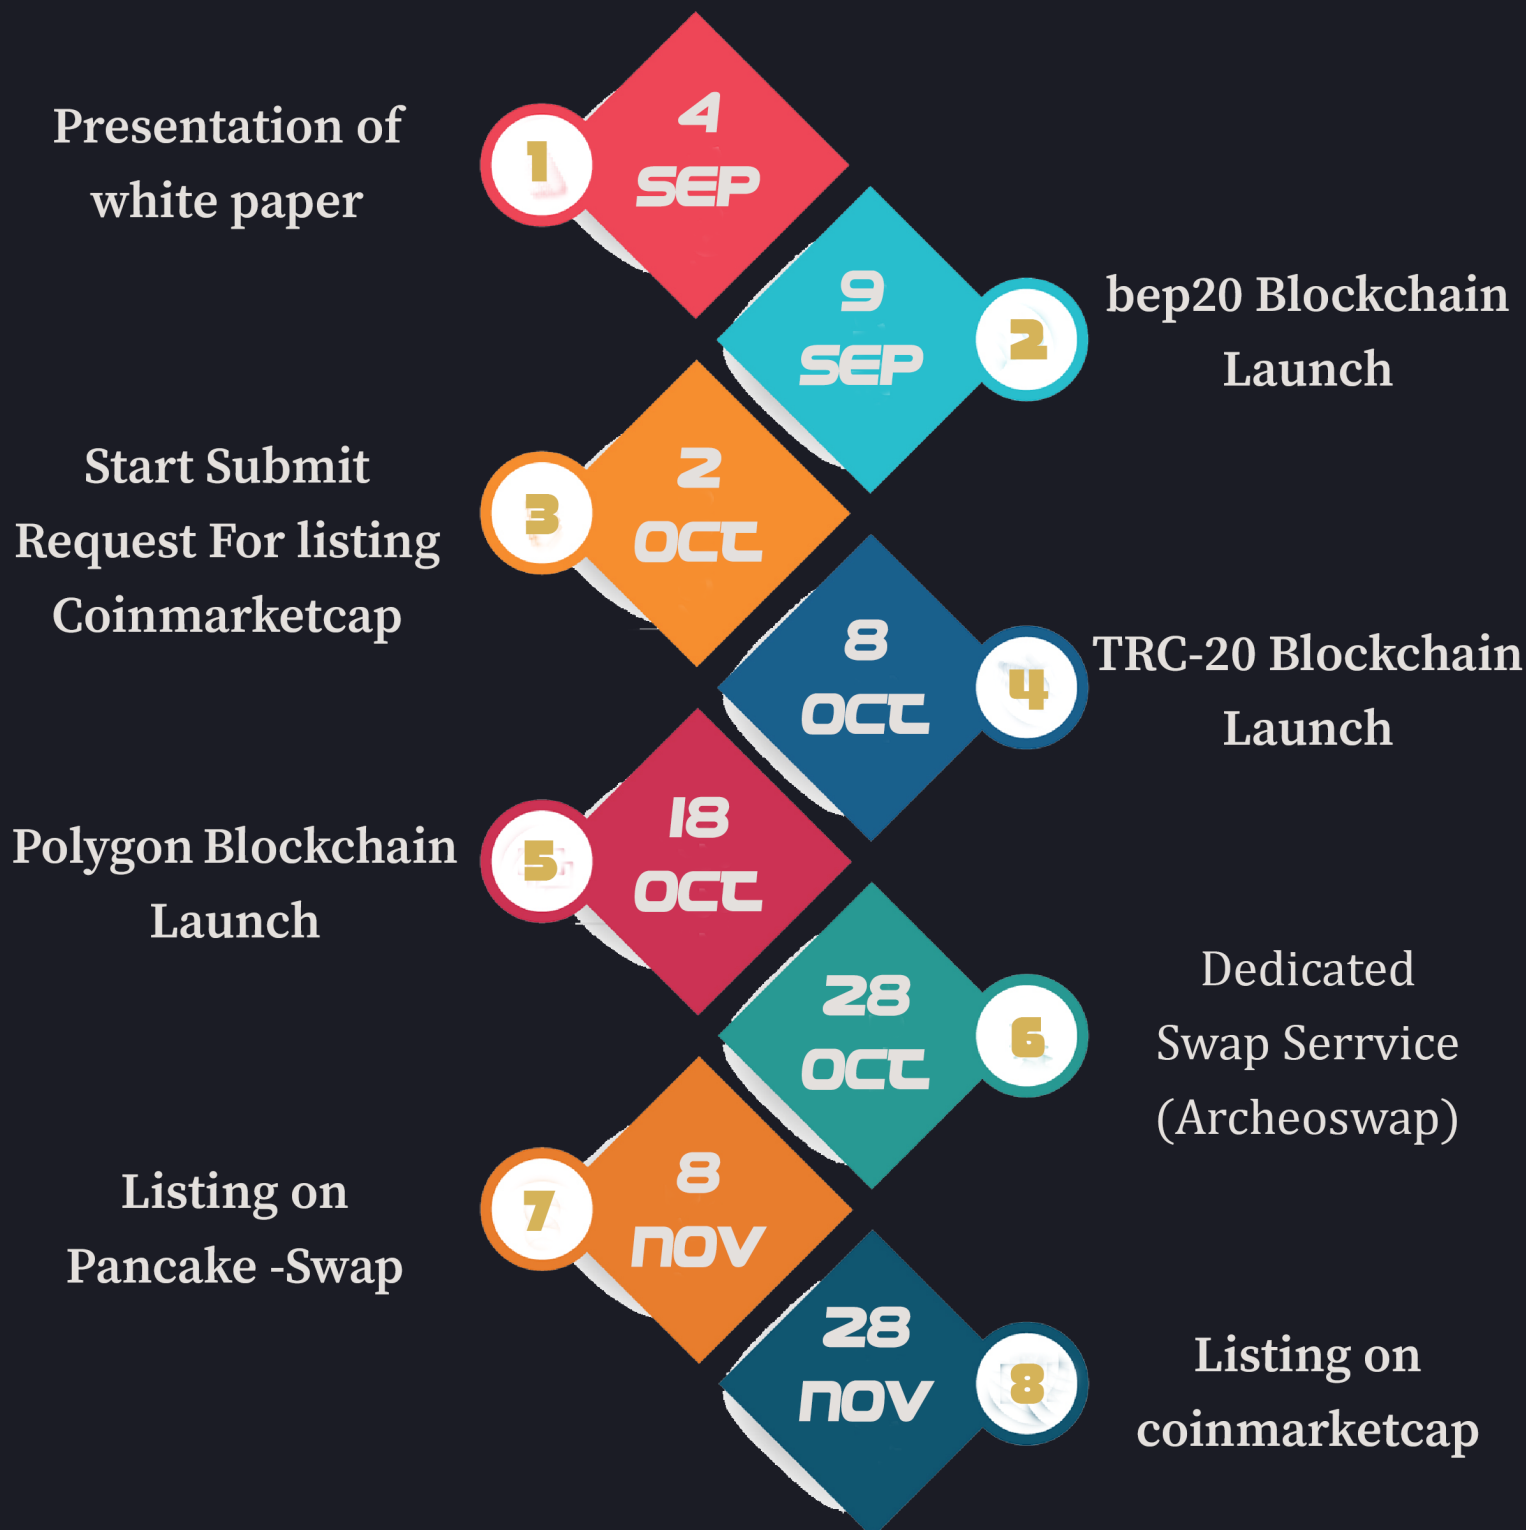

The customer will receive daily profit on their bet if they buy a certain quantity of archaeopteryx tokens and lock them for at least three months. Depending on the quantity of tokens and the length of the token lock, this profit can range from 1% to 8%.

In network marketing, the token buyer can make money by bringing new members who will stake in addition to the profit gained from locking his tokens. In network marketing, the representative can profit from introducing new members who join the cycle through their sub-branches and from earning up to 14 tiers of profit. This plan's profit is entirely floatable and at least equals 1% of the profit the person who introduced it received.

In addition to the technique below, different stake ways can be used through an investment. All percentages are flexible and subject to change; any changes will be announced on the website.

## ROAD MAPS :

Start listing on  
(hotbit,coinex  
and more...)

Launching a  
dedicated wallet  
service

Creating a  
proprietary  
blockchain

Creating a  
specialized  
centralized  
exchanger

Start the NFT  
service

Our commitment to the users does not end with the road map's completion. This causes the archaeopteryx development team to approach technology and new facilities with a new perspective during the time, which leads to the development and updating of all services depending on daily user needs.

## MARKET PROBLEMS

One of the major concerns for investors in the blockchain sector is fake pumps and dumps. Some robots buy at the opening price to add liquidity and then immediately sell when the price increases. As a result, customers who wish to buy and enter the market will discover that the price has decreased quickly. The issues that result in financial loss to newcomers to this industry as well as experienced individuals are unquestionably the biggest concern of all investors in the sphere of cryptocurrencies.

Consider there were 729 million tokens available for purchase. On the first day, a user purchases 3,649,000 tokens for \$10,000 at the spot rate of 0.00274. There will still be roughly 725,350,000 archaeopteryx tokens in use after this transaction, and each one will be worth about 0.002758.

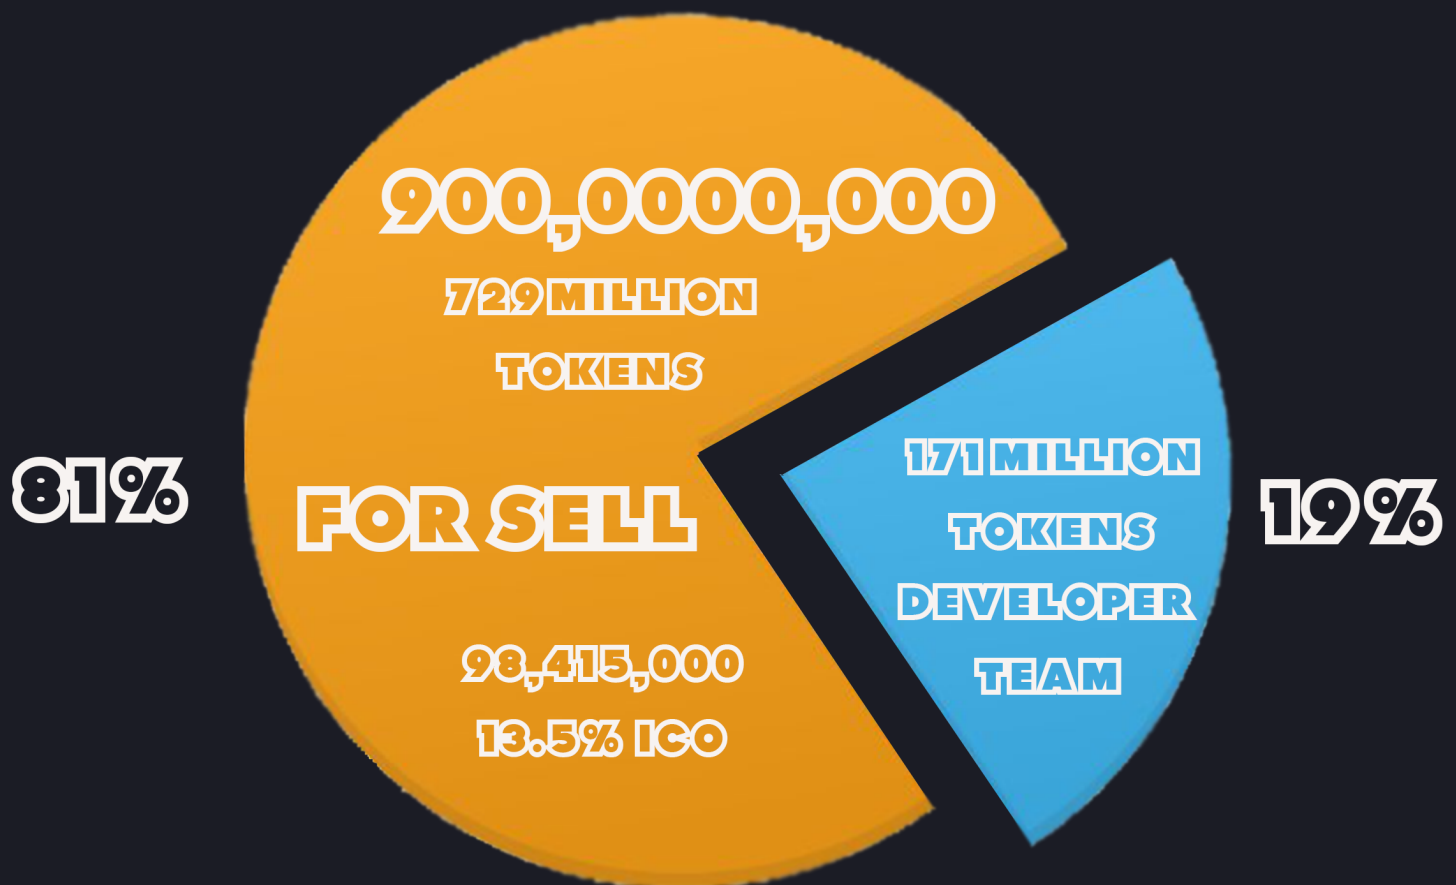

With the help of archaeopteryx users, we were able to propose practical solutions that will be put into place so that all investors can buy tokens whenever they want to without worrying that older holders will profit more. With this new strategy, token holders above the age of 50 will profit when they sell their tokens, but new users will not lose money when liquidity is added.

- Withdrawing money from investment pools is another issue that worries users and puts their money in danger. The majority of the time, a project manager is allowed to take out all of the working capital that he has invested into the platform at once. Project managers who behave in this way see a sharp fall in the token's value. If this problem is to be handled in any way, the initial capital must first be frozen.
- To reassure investors and users that secondary funds would be introduced to the market at pivotal periods when bearish candles appear, the archaeopteryx platform plans to lock its tokens for at least sixty months. Along with keeping the initial capital, which will be sold, this is also done.

One of the best things about investing in the archaeopteryx project is that the owners will always look for ways to help investors earn money with the least amount of risk. The fact that the archaeopteryx project is one of the best things about investing is one of its best features

## TOKENOMICS , APT TOKEN

Nineteen percent of the 900 million token units produced on the archaeopteryx platform of the BSC network were donated to the development team. Through the liquidity pool in Pancake Swap, the remaining 81% of the tokens-which had a value of \$2 million and a price of 0.00247 were made available to the general public. The development team unlocked it and made it available to users, and 13.5% of the tokens will be sold in the initial coin offering (ICO). Following the ICO, the public sale will begin through both centralized and decentralized exchanges.

Stable coin's 50% liquidity guarantee makes sure that just 50% of the platform's capital will be harmed if BNB's value falls. On the other hand, if the BNB rate increases, archaeopteryx capital will grow by up to 50%. Stablecoin thus has total control of the money, including any profit or loss.

This mutual liquidity injection is one of the strategies developed by our financial affairs specialists to handle users' assets on a secure platform. The archaeopteryx development team will purchase 11% of the tokens made available on the PancakeSwap market after receiving more funding and use them for airdrops and promotions.

This indicates that 11% of the funds will be allocated to airdrops and advertising in addition to the 19% share given to the development team.

In order to provide total justice and the highest level of transparency through our platform, the development team will be compelled to pay for airdrops and advertising like ordinary consumers. 7% of the 11% of bought tokens come from airdrops, and 4% come from advertising.

- The main goal of the archaeopteryx development team is to create a reliable brand that might be a fantastic secondary source of income. For the entire archaeopteryx development team, creating an enduring brand is essential because we aim to produce a reliable platform with a wide range of applications.

The more tokens in circulation and the fewer free tokens that are available for purchase, the greater the price of the token will be since the value of a token increases with each purchase and falls in the number of free tokens available for sale in the PancakeSwap pool. But the development team has vesting contract the equivalent asset and maintained it in the form of BNB and stablecoin.

archaeopteryx Tokens' price will never go below 0.00247 per unit as a result. Even if the price of BNB falls, the development team will inject liquidity in the form of stablecoins to maintain market regulation and the minimum rate constant.

In the worst-case scenario, since 50% of BNB assets are worth \$1 million, the development team will need to add \$1 million to the cash pool to restore the cost of the archaeopteryx token. This approach can be put into use by the development team for no more than \$1 million. Burning tokens is a well-liked strategy for raising asset value.

## **TOKEN DESTRUCTION :**

This token may be burned an undetermined number of times, and it is even conceivable to burn a token more than once in seven days. In order to burn 30% of the \$100,000 for each exoft token in three years, archaeopteryx Co. wants to burn tokens with the income received from tokens. Occasionally, tokens are not burned after three months.

As we just discussed, token burning happens throughout the liquidity injection process. If token owners with numerous assets sell them all at once, the value of each token will decrease over time.

Our finance department professionals will right away use the cash assets of the project donated by the development team and gained through the PancakeSwap exchange to ensure that the value of archaeopteryx tokens does not decrease and stays the same as before the whales were sold.

The development team receives tokens in exchange for a cash infusion, and the entire sum is burned at once.

The value of the users' possessions increases as a result of this issue, and the token's value is steady even after a sizable chunk of it has been removed from the market cycle. This process is repeated until the maximum number of tokens burned reaches 30%.

The tokens will subsequently be given to the development team as financing to dominate the market. The development team can sell the token at any time, just like a client. The development team will never sell all of its tokens at once, but it will constantly sell tokens to manipulate the market because it has a significant holding.

We want to employ innovative techniques to guard against potential user financial losses, which will lead to an equitable distribution of profits among all users and stop an excessive concentration of wealth in the hands of a select few.

## **HOW TO USE USERS' FUNDS :**

The holders' capital is essentially unaffected by the archaeopteryx , and it will not be in the future either. This platform's main goal is to unite a big community of token owners and investors who may earn money by conducting a variety of transactions on the DeFi platform using the archaeopteryx token. To put it another way, neither The archaeopteryx Co. nor any of its users' assets or monies will ever be utilized to buy tokens from The archaeopteryx Co.

The assets and tokens that users own are typically regarded as capital that the development team is unable to access. Investors are the only ones with access to the site and their money through their individual wallets. The development team will not have access to the initial funding for another five years, but this is still a possibility.

The transaction fees are used to pay the archaeopteryx development team. To control the market and prevent fraudulent "pump and dumps," only 19% of the tokens were distributed to the personnel at the start of the project.

## **HOW THE ARCHEOSWAP DEVELOPMENT TEAM BENEFITS**

Because archeopteryx is a decentralized financial platform, it makes money by taking fees from different transactions. You must pay a fee if you want to invest in a certain sector of the economy or trade one currency for another. The cost of the transaction and investment elements as a whole already includes this fee. To put it another way, you must pay a fee in order to use any of the services provided by the archeopteryx platform.

This is so that the team in charge of working on the archeopteryx can collect all of its fees. Our main objective will be to increase usage of the facilities after we figure out how to use an archeopteryx token.

- The development team notices a direct relationship between user count and revenue produced. While this is going on, the development team "burns" tokens using platform payments, which increases the liquidity of the archeopteryx tokens' initial capital pool. The combined efforts of all of these factors will aid in the development of the archeopteryx project.

For both of you, taking part in the archeopteryx initiative is a wise business decision.

Our users have access to a wide variety of features. You can trade more than 400 different cryptocurrencies, for example, while incurring the least expensive fees. The transaction fees are also used to compensate the development team members.
